

Genius Roller Screen

The Genius Vertical Roller Flyscreen incorporates all the benefits of a roller style system.

One major advantage is that the flyscreen mesh retracts neatly into the cassette when closed.

The Genius system uses our standard 18x16 fibreglass charcoal mesh.

Above - Genius Roller shown reveal fitted.

Flydor can supply fully manufactured screens, kits or components for the Genius.

Sizes - The recommended maximum size of the Genius system is 2 metres square. The cassette comes pre-loaded with 1750mm or 2600mm drop mesh.

Adaptability - To adjust the blind width, only the cassette needs to be cut to the correct size. To adjust the length, only the side guides need to be cut correctly.

fixed.
